

# **CS Basics: Input, Process, Output**

**by Mr Matthews**

<https://youtu.be/CBf-jIn44X0>

**NAME:**

1. What is an input?
2. What do we call devices that input information into a computer?
3. What does the computer do once it has received inputs?
4. What do we call this action?
5. Where in the computer is this done?
6. Once the computer works out what needs to be done when it is done processing, what often happens next?
7. What is the purpose of output?

8. What are examples of output?

9. What is a program?

10. What is the purpose of storage?

11. What are 2 things storage does?

12. At the end of the video's quick review, please identify and example of how input-process-output is used on a device you are familiar with.
